DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on 30 August 2004 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent No. 6,072,431 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 1, 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- In claim 1 there is claimed "a processor configure to process the positioning signals...", and subsequently in claim 10 there is claimed "the firewall comprises the steps of processing the positioning signals...". It is unclear what is being claimed to process these positioning signals and further clarification is requested. For the purpose of examination the processor of claim 1 will be treated as the processor of the positioning signals.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this

Art Unit: 2132

subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-13 are rejected under 35 U.S.C. 102(e) as being anticipated by MacDoran, U.S. Patent No. 5,757,916. Referring to claims 1, 5-7, 9-13, MacDoran discloses authentication system wherein GPS position information about a user is collected to authentication the user (Col. 2, lines 35-40), which meets the limitation of a receiver (Fig. 2, 218) configured to receive positioning signals, a processor (Fig. 2, 218) configure process the positioning signals in a real time manner to generate positioning data. A host system is provided (Fig. 1, 150) to perform centralized digital signal processing on the information provided by the location signature sensor devices in order to perform location determinations for initial location registration and to perform subsequent authentications of the users (Col. 2, lines 47-54), which meets the limitations of user application code (Fig. 1, 112) executed by the processor said application code configured to access positioning data. A firewall is configured between (Col. 15, lines 47-59) the receiver and processor (Fig. 2, 218) and the access control module (Fig. 2, 212), which meets the limitation of a firewall, comprises a virtual machine, established between the processor and the user application code, said firewall configured to prevent the user application code form corrupting positioning data and enables the processor to process the positioning signals in real time without interference by the user application code.

Referring to claims 2, 3, MacDoran discloses a host authentication processor that access the positioning data received (Col. 10, line 65 – Col. 11, line 11), which meets the limitation of an application programming interface, comprising a plurality of objects, configured to access the positioning data as instructed by the user application code.

Application/Control Number: 09/520,378

Art Unit: 2132

Referring to claims 4, 8, MacDoran discloses that the system utilizes the Windows

operating system (Col. 13, lines 19-20), which meets the limitation of the processor executes a

real time operating system.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Benjamin E Lanier whose telephone number is 571-272-3805.
